FREEDOM AREA SCHOOL DISTRICT PROJECT PROGRESS REPORT

November 2024 Update

WHAT'S NEW?

As the project continues, we are excited to share that full color renderings are being developed. You can see the initial implementation of full color renderings of what spaces in the addition and in the remodel could look like on the following page.

As mentioned in prior updates, it is important to the district that as the addition is being built, there is a cohesiveness in finishes between the existing building that is being remodeled, and the new addition spaces. You can see an example of the desired cohesiveness in the renderings of the high school main office and the cafeteria; which are both new spaces, and the Science Collaboration area, which is the current Tech. Ed. area of the building that is being renovated.

PLANNING & DESIGN UPDATE

The design team has completed all of the staff and user meetings and is now shifting their focus on sharing that information with engineers for implementation. The next four months are largely focused on implementation of staff feedback, operational details, and drafting the final details for a constructable project that C.D. Smith Construction will take to bid in early April.

NEXT STEPS

- » Coordinating of engineering
- » Detailed construction drawings
- » Town and County coordination
